4. Description of your research activities (max 10 lines)*

The proposal will develop concrete actions in the field of Heritage, Memory, Architecture and Landscapes. The main goal of this project will be the mapping of European NATO Bases. A theoretical research will be developed in order to choose the more suitable of them to be part of a new network of European NATO Bases. The new network could be able to offer the knowledge of the Cold War cultural "atmosphere" for a various kind of users. The Bases of the Cold War are dislocated in areas with utterly different geographical and topological characteristics, thus creating a complex but at the same time richer picture to interpret. Identifying the environmental resources and the built heritage in respect of the local and historical tradition, this programme aims to recognize the diversity of the territories (local identities) because working on the two tracks: the value of tradition and the importance of innovation, we can define a new idea of responsible development and create a modern process of economic and societal growth.

5. Key-words

Military Architecture, Landscape, Heritage, Memory, Cold War, Reuse.
